

S.STEEL ELECTRODES D. 3,2 MM 8 PCS

Overview

S.STEEL ELECTRODES D. 3,2 MM 8 PCS

cod. 802624

Stainless steel welding electrodes in practical blister packs. The special coating on the electrodes gives it an excellent surface after solidification and guarantees excellent finishes to welding operations. They can be used in all positions and guarantee good levels of stability for the arc; welding can be performed using Inverted Polarity continuous current (positive with electrode holder clamp) and in alternate current with excellent mechanical characteristics in the smelting zone. They are used for welding average thicknesses.
